

## Reverse a String

Given a string S as input. You have to reverse the given string.

**Input:** First line of input contains a single integer T which denotes the number of test cases. T test cases follows, first line of each test case contains a string S.

**Output:** Corresponding to each test case, print the string S in reverse order.

**Constraints:**

$1 \leq T \leq 100$

$3 \leq \text{length}(S) \leq 1000$

**Example:**

**Input:**

3
