

Remove characters from alphanumeric string

Remove all characters from an alphanumeric string.

Input:

The first line of the input contains T denoting the number of testcases. First line of each test case will be an alphanumeric string.

Output:

For each test case output will be a numeric string after removing all the characters.

Constraints:

$1 \leq T \leq 30$

$1 \leq \text{size of string} \leq 100$

Example:

Input:

1

AA123BB4

Output:

1234
